

NURTURING POSITIVE CHILD-TEACHER RELATIONSHIPS

WHY SHOULD YOU DEVELOP POSITIVE RELATIONSHIPS WITH YOUR STUDENTS

Positive child-teacher relationships are important to young children's social, emotional, and cognitive development. A secure child-teacher relationship helps young children develop secure relationships with peers and other adults. Building this relationship can also help reduce the frequency of challenging behavior and increase young children's engagement across contexts.

POSITIVE ATTENTION

POSITIVE DESCRIPTIVE FEEDBACK

NONCONTINGENT REINFORCEMENT

RECIPROCAL CONVERSATIONS

PROXIMITY AND PLAYTIME

REPRESENTATION IN THE CLASSROOM

POSITIVE ATTENTION

What is positive attention?

Positive attention can be any social interaction children enjoy (ex: high fives, playing, positive descriptive feedback)

Find out what kinds of attention children prefers-- children might prefer smiles over air high-fives, or playing games together over reading together

Provide positive attention to all children throughout the day to support development and engagement across activities and routines

Provide positive attention especially before and during times when challenging behavior is likely to occur

Positive attention does not need to be contingent on the child doing anything

See next page for tips on providing positive descriptive feedback!

POSITIVE DESCRIPTIVE FEEDBACK

What is positive descriptive feedback?

Positive descriptive feedback lets children know the behaviors you want them to engage in

When providing feedback, label the behavior children engage in that you want to see again

Pair positive descriptive feedback with positive attention to increase the likelihood children will engage in that behavior in the future

Provide positive descriptive feedback during times when challenging behavior is likely to occur

Use these sentence starters to vary your positive descriptive feedback

NONCONTINGENT REINFORCEMENT

What is noncontingent reinforcement?

Reinforcement can be anything children prefer- you can provide a break from work, access to an item, positive attention, etc.

Noncontingent reinforcement reduces the likelihood children will engage in challenging behavior

Providing noncontingent reinforcement lets children know you are there to support them and help meet their needs

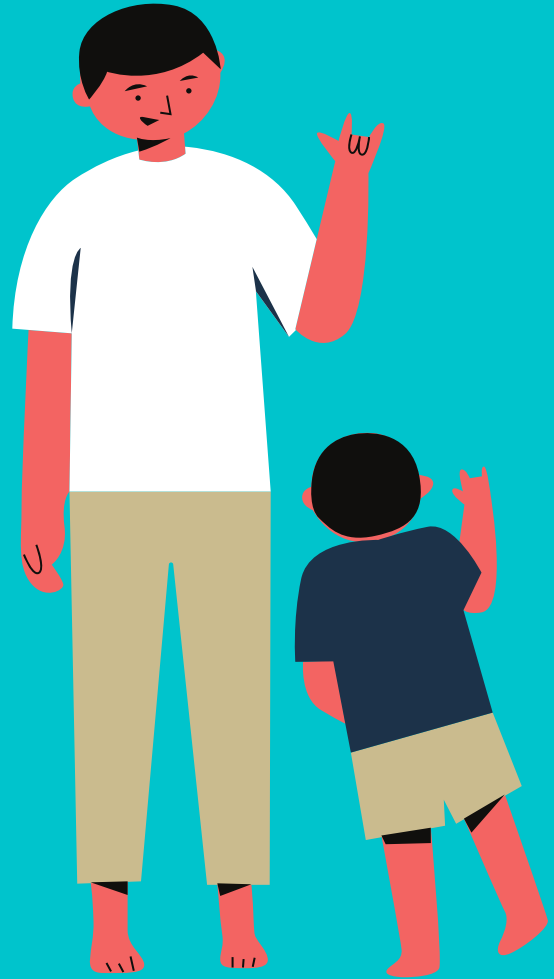

Provide noncontingent reinforcement throughout the day to increase engagement and reduce challenging behavior

See next page for tips on engaging in reciprocal conversations with children!

RECIPROCAL CONVERSATIONS

What are reciprocal conversations?

Check in with children often about how they are feeling and talk about your own emotions

An illustration of a man in a white shirt and tan pants standing and talking to a child in a dark blue shirt and tan shorts who is standing with their back to the viewer. The background is a solid teal color.

Acknowledge all communication attempts children make to increase language development

An illustration of two children, a girl in a yellow shirt and a girl in a yellow dress, standing and interacting. The girl in the dress is holding a small object. The background is a solid pink color.

Actively listen to children and encourage them to listen to you

An illustration of two people sitting on the floor. One person is holding a wrapped gift, and the other is looking at it. The background is a solid teal color.

Respond to children's interactions by imitating, making eye contact, using a positive tone, acknowledging facial expressions

An illustration of three children standing and interacting. One child is in a blue shirt, one in a yellow shirt, and one in a green shirt. The background is a solid pink color.

See next page for tips on the importance of proximity and playing with the child!

PROXIMITY AND PLAY TIME

What is proximity and play time?

Proximity and play time involves being close to children while interacting with them and engaging in activities that they enjoy

Interact with children close to them and on their level to promote joint attention

Join in children's play and follow their lead by imitating their play actions and expanding on their play

Play is a form of positive attention and can be used as noncontingent reinforcement

Play with many children across the day to increase engagement and let them know you are there to support them

REPRESENTATION IN THE CLASSROOM

What is representation?

Representation involves having a diverse collection of materials and media that represent the children in your classroom.

Representation in media and materials helps children develop positive self-identities

Look at your class materials (ex: books, pictures, toys) to check for representation across race, ethnicity, disability, family structure, etc.

Consider each child's cultural, linguistic, and ethnic background

Reflect on your implicit biases to ensure you are being responsive to each child
