Assistant Professor of Medicine,
Division of Endocrinology and Metabolism
Clinical Investigator in Residence,
Department of Neuroscience
University of Virginia

Diabetes and Alzheimer's Disease: Multiple Overlapping Mechanisms of Risk

Type 2 diabetes and Alzheimer's disease share multiple overlapping abnormalities, including increased inflammation, insulin resistance and abnormal lipid metabolism. In addition, type 2 diabetes is a risk factor for the development of Alzheimer's disease. We will explore how some of the metabolic abnormalities seen in diabetes may be driving the increased risk for Alzheimer's disease in our diabetes patients.

Provided by the Vanderbilt University Medical Center and the Vanderbilt Diabetes Center. Vanderbilt University Medical Center is accredited by the Accreditation Council for Continuing Medical Education to provide continuing medical education for physicians. Vanderbilt University Medical Center designates this live activity for a maximum of 1 AMA PRA Category 1 credit(s) ™. Physicians should claim only the credit commensurate with the extent of their participation in the activity.
