

Saturn V Rocket

The U.S. Space & Rocket Center (USSRC) in Huntsville, AL is the official visitor center for NASA's Marshall Space Flight Center and boasts one of the largest rocket and space memorabilia collections in the world. On site is this model of a **Saturn V rocket** set in a larger rocket "garden" outside. Suspended the length of the visitor center is an actual Saturn V, which is designated a National Historic Landmark. The rocket was designed at Marshall and used between 1967 and

1973 for the Apollo program's missions to the Moon and to launch Skylab. It remains the only rocket to take humans beyond low Earth orbit.
